Create detail or summary reports

Easily generate charts & graphs

Powerful do-it-yourself reporting

Radixx™ RADAR™ provides dozens of powerful reports to help you manage your business, but what if a standard RADAR™ report is not exactly what you are looking for? What if you need an additional piece of information, or less information, or information summarized differently? RETRIEVE™ is an intuitive self-service report authoring system that lets you build custom reports and retrieve your airline's data. Choose your columns, create filters, summarize values, extract to popular data formats and more! Identify trends, drill into details, and use your airline's data (past, present, and future) to enhance business performance.

Radixx™ Data Warehousing

The first step of implementing RETRIEVE™ is for Radixx to build your airline a state-of-the-art data warehouse. Your warehouse, running on cutting edge Oracle databases, is designed for speed, reliability and security. This warehouse is typically refreshed daily, giving you current data through the previous business day.

Perfect for any sized airline

Airlines vary in size and thus so does the number of self-reporting users you may want to have. Purchase multiple or as few as one user when ordering RETRIEVE™. If your needs later increase, you can add additional self-reporting users at any time.

Now available: Phase 1, including:

- detailed booking information
- passenger contact information
- segment revenue summary
- travel agent info
- book, cxl and flight dates
- fare basis
- fare class
- flight info
- reservation channel
